CONTENTS OF VOLUME 277

Number 1, February 15, 1990

BIOLOGICAL OXIDATIONS, BIOENERGETICS, AND P450 REACTIONS

Selective Induction of Cytochrome P450 Isozymes in Rat Liver by 4-*n*-Alkyl-methylenedioxybenzenes
Craig B. Marcus, Neil M. Wilson, Colin R. Jefcoate, Christopher F. Wilkinson, and Curtis J. Omiecinski 8

Selective Expression of Cytochrome P450 Isozymes by 4-*n*-Alkyl-methylenedioxybenzenes in Rat Lung Cells
Craig B. Marcus, Neil M. Wilson, Ingegerd M. Keith, Colin R. Jefcoate, and Curtis J. Omiecinski 17

Developmental Regulation of Hepatic Testosterone Hydroxylases: Simultaneous Activation and Repression of Constitutively Expressed Cytochromes P450 in Senescent Rats *Richard C. Robinson, Kiyoshi Nagata, Harry V. Gelboin, Joseph Rifkind, Frank J. Gonzalez, and Fred K. Friedman* 42

Evidence for Superoxide Dismutase and Catalase in Mollicutes and Release of Reactive Oxygen Species
Beate Meier and Gerhard G. Habermehl 74

Physical and Chemical Scavenging of Singlet Molecular Oxygen by Tocopherols
Stephan Kaiser, Paolo Di Mascio, Michael E. Murphy, and Helmut Sies 101

Photoionization Used as a Tool for the Study of Biomembranes: Fate of Tetramethylbenzidine Photocation in Purple Membrane *Marie-Emmanuel Rivière, Dora Grand, and Bernard Arrio* 130

Inhibition of Ischemia and Reflow-Induced Liver Injury by an SOD Derivative That Circulates Bound to Albumin *Shunji Kawamoto, Masayasu Inoue, Seiki Tashiro, Yoshimasa Morino, and Yoshimasa Miyauchi* 160

Reconstitution of Testosterone Oxidation by Purified Rat Cytochrome P450p (IIIA1)
Michael Halvorson, Denise Greenway, Delmont Eberhart, Kathleen Fitzgerald, and Andrew Parkinson 166

ENZYME MECHANISMS AND METABOLIC REGULATION

Partial Purification and Characterization of an Acetylcarnitine Hydrolase from Bovine Epididymal Spermatozoa *Kerry Bruns and Edmund R. Casillas* 1

Characteristics of L-Alanine:4,5-Dioxovaleric Acid Transaminase: An Alternate Pathway of Heme Biosynthesis in Yeast *Kishalay Hoare and Kasturi Datta* 122

Reductive Activation of Potential Antitumor Bis(aziridinyl)benzoquinones by Xanthine Oxidase: Competition between Oxygen Reduction and Quinone Reduction
K. J. Lusthof, W. Richter, N. J. de Mol, L. H. M. Janssen, W. Verboom, and D. N. Reinhoudt 137

Synthesis and Study of (*Z*)-3-Chlorophosphoenolpyruvate *Jie Liu, James A. Peliska, and Marion H. O'Leary* 143

Inhibition of Glutathione Reductase by Oncomodulin
Elizabeth J. Palmer, J. P. MacManus, and Bulent Mutus 149

Inactivation of Organophosphorus Nerve Agents by the Phosphotriesterase from *Pseudomonas diminuta*
David P. Dumas, H. Dupont Durst, Wayne G. Landis, Frank M. Raushel, and James R. Wild 155

Essential Histidine Residues in Coenzyme B_{12}-Dependent Diol Dehydrase: Dye-Sensitized Photooxidation and Ethoxycarbonylation *Sachiko Kuno, Saburo Fukui, and Tetsuo Toraya* 211

GENETIC STRUCTURE AND FUNCTION

Isolation and Characterization of the Rat Glutathione *S*-Transferase Yb_1 Subunit Gene
Marcia R. Morton, Richard M. Bayney, and Cecil B. Pickett 56

GLYCOPROTEINS, GLYCOLIPIDS, AND EXTRACELLULAR MATRICES

Asparagine-Linked Glycoprotein Biosynthesis in Rat Brain: Identification of Glucosidase I, Glucosidase II, and an Endomannosidase (Glucosyl Mannosidase) *D. R. P. Tulsiani, Vera D. Coleman, and Oscar Touster* 114

Characterization of Two Monoclonal Antibodies Specific for Lacto-Series Type 1 Chain Galβ1 → 3GlcNAc-Terminal Structures *Eric H. Holmes and Thomas G. Greene* 181

LIPIDS AND LIPID MEDIATORS

Essential Residues in Lysolecithin: Lysolecithin Acyltransferase from Rabbit Lung: Assessment by Chemical Modification *J. Pérez-Gil, J. J. Martín, C. Acebal, and R. Arche* 80

Enzymatic Formation of 9,16-Dihydro(pero)xyoctadecatrienoic Acid Isomers from α-Linolenic Acid *Dai-Eun Sok and Mee Ree Kim* 86

Regulation of Sulfotransferase Activity by Vitamin K in Mouse Brain *K. Soma Sundaram and Meir Lev* 109

MEMBRANE RECEPTORS, TRANSPORT, AND INTRACELLULAR SIGNALS

The Heavy Metal Ions Ag^{+} and Hg^{2+} Trigger Calcium Release from Cardiac Sarcoplasmic Reticulum *Sumanth D. Prabhu and Guy Salama* 47

PHYSICAL BIOCHEMISTRY

Fumarase: Viscosity Dependence of the Kinetic Parameters *William L. Sweet and John S. Blanchard* 196

PLANT MOLECULAR BIOLOGY, BIOCHEMISTRY, AND PHOTOSYNTHESIS

Isolation and Characterization of One Isoform of Actin from Cultured Soybean Cells *Marco A. Villanueva, Siu-Cheong Ho, and John L. Wang* 35

The Dimeric Form of Phosphoenolpyruvate Carboxylase Isolated from Maize: Physical and Kinetic Properties *Narendra Jawali* 61

Hysteretic Nature of Phosphoenolpyruvate Carboxylase Isolated from Maize *Narendra Jawali* 69

Chlorophyll-Free Chromoplasts from Daffodil Contain Most of the Enzymes for Chlorophyll Synthesis in a Highly Active Form *Manfred Lützow and Hans Kleinig* 94

PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

Age-Related Change in the Degradation Rate of Ovalbumin Microinjected into Mouse Liver Parenchymal Cells *Akihito Ishigami and Sataro Goto* 189

PROTEIN STRUCTURE AND FUNCTION

Binding of Nucleoside Triphosphates, Inorganic Phosphate, and Other Polyanionic Ligands to the N-Terminal Region of Rat Brain Hexokinase: Relationship to Regulation of Hexokinase Activity by Antagonistic Interactions between Glucose 6-Phosphate and Inorganic Phosphate *Tracy K. White and John E. Wilson* 26

Purification, Characterization, and Partial Sequence Analysis of 32-kDa Calcimedin from Chicken Gizzard *Ryoji Kobayashi, Hiroyoshi Hidaka, and Yohtalou Tashima* 203

Number 2, March 1990

BIOLOGICAL OXIDATIONS, BIOENERGETICS, AND P450 REACTIONS

Alteration of Aminoacyl-tRNA Synthetase with Age: Heat-Labilization of the Enzyme by Oxidative Damage *Ryoya Takahashi and Sataro Goto* 228

Membrane Lipid Composition, Fluidity, and Surface Charge Changes in Response to Growth of the Fresh Water Cyanobacterium *Synechococcus* 6311 under High Salinity *Gennady Khomutov, Ian V. Fry, Margaret E. Huflejt, and Lester Packer* 263

NADPH- and Adriamycin-Dependent Microsomal Release of Iron and Lipid Peroxidation *Giorgio Minotti* 268

Identification of 8α,25-Dihydroxy-9,10-seco-4,6,10(19)-cholestatrien-3-one as a Product of Metabolism of 25-Hydroxycholecalciferol by Liver Microsomes
Myrtle Thierry-Palmer, Kevin A. Richardson, Heinrich K. Schnoes, Sachiko Yamada, and Almena L. Free 277

Mutations in α-Subunit of *Escherichia coli* F_1-ATPase Obtained by Hydroxylamine-Mutagenesis of Plasmids Carrying the *uncA* Gene *Janet Pagan and Alan E. Senior* 283

On the Hydroxyl Radical Formation in the Reaction between Hydrogen Peroxide and Biologically Generated Chromium(V) Species *Xianglin Shi and N. S. Dalal* 342

The Hepatic Ah Receptor for 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin: Species Differences in Subunit Dissociation
Michael S. Denison and Lynn M. Vella 382

In Vivo Thiyl Free Radical Formation from Hemoglobin following Administration of Hydroperoxides
Kirk R. Maples, Christopher H. Kennedy, Sandra J. Jordan, and Ronald P. Mason 402

ADP–Iron as a Fenton Reactant: Radical Reactions Detected by Spin Trapping, Hydrogen Abstraction, and Aromatic Hydroxylation *John M. C. Gutteridge, Imre Zs.-Nagy, Lindsay Maidt, and Robert A. Floyd* 422

ENZYME MECHANISMS AND METABOLIC REGULATION

Characterization of Molecular Species of Liver Microsomal Carboxylesterases of Several Animal Species and Humans *Masakiyo Hosokawa, Takako Maki, and Tetsuo Satoh* 219

A Particle Concentration Fluorescence Immunoassay for Prostaglandin D Synthase in the Rat Central Nervous System *Fakhrul Islam, Yoshihiro Urade, Yasuyoshi Watanabe, and Osamu Hayaishi* 290

The Inhibition of Yeast Enolase by Li^+ and Na^+ *Mary Judith Kornblatt and Roy Musil* 301

Effect of Brief Treatment at Alkaline pH on the Properties of UDP-Glucuronosyltransferase
Andrew Dannenberg, Timothy Wong, and David Zakim 312

Tetrahydrohomofolate Polyglutamates as Inhibitors of Thymidylate Synthase and Glycinamide Ribonucleotide Formyltransferase in *Lactobacillus casei*
Janet Thorndike, Roy L. Kisliuk, Yvette Gaumont, James R. Piper, and Madhavan G. Nair 334

Novel Allosteric Sites on Human Erythrocyte Acetylcholinesterase Identified by Two Monoclonal Antibodies
C. Erik Olson, Vijay Chhajlani, J. Thomas August, and Eli D. Schmell 361

Biosynthesis of Monoterpenes: Stereochemistry of the Coupled Isomerization and Cyclization of Geranyl Pyrophosphate to Camphane and Isocamphane Monoterpenes
Rodney Croteau, Jonathan Gershenzon, Carl J. Wheeler, and D. Micheal Satterwhite 374

Differential Regulation of Hepatic Carbonic Anhydrase Isozymes in the Streptozotocin-Diabetic Rat
Susanna J. Dodgson and Malcolm Watford 410

Anomerization and Hydrolysis of Lactose by β-Galactosidase from *Saccharomyces lactis*
Alafuele Mbuyi-Kalala, Jean Paul Perraudin, and Jean Paul Prieels 434

GENETIC STRUCTURE AND FUNCTION

Sequence of the Precursor of Bovine Liver Mitochondrial Aldehyde Dehydrogenase as Determined from Its cDNA, Its Gene, and Its Functionality *Kunliang Guan and Henry Weiner* 351

GLYCOPROTEINS, GLYCOLIPIDS, AND EXTRACELLULAR MATRICES

Isolation and Characterization of a Second Lectin (SNA-II) Present in Elderberry (*Sambucus nigra* L.) Bark
Hanae Kaku, Willy J. Peumans, and Irwin J. Goldstein 255

Partial Characterization of Proteoglycans Synthesized by Human Glomerular Epithelial Cells in Culture
David J. Klein, Theodore R. Oegema, Jr., Thomas S. Fredeen, Fokko van der Woude, Youngki Kim, and David M. Brown 389

LIPIDS AND LIPID MEDIATORS

Effects of Vitamin E on Prostacyclin Release and Lipid Composition of the Ischemic Rat Heart
David D. Pyke and Alvin C. Chan 429

MEMBRANE RECEPTORS, TRANSPORT, AND INTRACELLULAR SIGNALS

Presence of the Cytosolic Factor Stimulating the Import of Precursor of Mitochondrial Proteins in Rabbit Reticulocytes and Rat Liver Cells *Hideyu Ono and Syozo Tuboi* 368

PHYSICAL BIOCHEMISTRY

Determination of Tryptophan, Tyrosine, and Phenylalanine by Second Derivative Spectrophotometry
Yasuhiko Nozaki 324

Interactions of Triply Phosphorylated Human β-Casein: Monomer Characterization and Hydrodynamic Studies of Self-Association *Satish M. Sood, Pat Chang, and Charles W. Slattery* 415

PLANT MOLECULAR BIOLOGY, BIOCHEMISTRY, AND PHOTOSYNTHESIS

Modeling of the Electrostatic Potential Field of Plastocyanin
Stewart R. Durell, Jan K. Labanowski, and Elizabeth L. Gross 241

PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

Prooxidant Action of Desferrioxamine: Enhancement of Alkaline Phosphatase Inactivation by Interaction with Ascorbate System
Alvaro Mordente, Elisabetta Meucci, Giacinto A. D. Miggiano, and Giuseppe E. Martorana 234

Synthetic HIV-2 Protease Cleaves the GAG Precursor of HIV-1 with the Same Specificity as HIV-1 Protease
John C. Wu, Stephen F. Carr, Kurt Jarnagin, Steven Kirsher, Jim Barnett, Joan Chow, Hardy W. Chan, Ming S. Chen, Denes Medzihradszky, Donald Yamashiro, and Daniel V. Santi 306

PROTEIN STRUCTURE AND FUNCTION

Aldehyde Dehydrogenase Heterogeneity in Rat Hepatic Cells *Min Huang and Ronald Lindahl* 296

Protein Kinase C Penetration into Lipid Bilayers *Vlad Brumfeld and David S. Lester* 318

ERRATUM

Volume 272, Number 1 (1989): Robert C. Blake II, Robert F. Vassall, and Diane A. Blake, "The Michaelis Constants of a Nonchromogenic Substrate May Be Determined Using a Chromogenic Substrate," pp. 52–68 439

AUTHOR INDEX FOR VOLUME 277 440

NOTICE

The Subject Index for Volume 277 will appear in the December 1990 issue as part of a cumulative index for the year 1990.

Archives of Biochemistry and Biophysics

INSTRUCTIONS FOR AUTHORS[1]

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Short Communications offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors may send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of original figures or good quality glossy prints, to:

Archives of Biochemistry and Biophysics
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Gene sequences should be simultaneously submitted to a gene databank. Authors of papers describing new structure determinations are requested to submit to the Protein Data Bank all of the structural data required to validate the discussion, including both x-ray amplitudes and phases and the advised atomic coordinates.

Original papers only will be considered. ***Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. It is the responsibility of the corresponding author to obtain the agreement of all the coauthors of the manuscript prior to its submission to the journal.*** Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted:

Biological Oxidations, Bioenergetics, and P450 Reactions
Enzyme Mechanisms and Metabolic Regulation

[1] An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Genetic Structure and Function
Glycoproteins, Glycolipids, and Extracellular Matrices
Lipids and Lipid Mediators
Membrane Receptors, Transport, and Intracellular Signals
Physical Biochemistry
Plant Molecular Biology, Biochemistry and Photosynthesis
Proteases, Protein Turnover, and Post-translational Processing
Protein Structure and Function

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet: footnotes to tables should be identified by superscript lowercase italic letters (^{a,b}, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, 3.5 in.) and submitted no larger than 8.5 × 11 in. Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1985. Please note the following examples.

1. Webster, K. D., and Anders, M. W. (1989) *Arch. Biochem. Biophys.* **273,** 562–571.
2. Stein, W. D. (1986) Transport and Diffusion across Cell Membranes, Academic Press, San Diego.
3. Magnani, J. L., Spitalnik, S. L., and Ginsburg, V. (1987) *in* Methods in Enzymology (Ginsburg, V., Ed.), Vol. 138, pp. 195–207, Academic Press, San Diego.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
